Customer name

ZURI GENESIS KDM 168K

VIN

JAAN1R81MN7100356

Travel distance

1,690 km

Good

Attention

Careful Attention

Timing Of Next Recommended Inspection

Recommended
inspection interval

09/22/2023

Travel distance
(estimate)

11,690 km

This vehicle is classified as a Traffic Congestion/Slow Travel type. First, check the stop count and please confirm brake usage. Additionally, battery damage due to poor charging is possible. In the event of frequent traveling on rough/dusty roads, please increase the inspection frequency of air filter elements and lubrication of required areas in addition to the above. For vehicles that are equipped with DPD (DPF) in particular, extreme use of the DPD (DPF) system may impact the fuel economy. However, if the vehicle allows manual regeneration, proactively operating the manual regeneration can reduce the load on the DPD (DPF). Also, if you sense something wrong with the DPD (DPF), we recommend that you get an early inspection, to reduce the cost of vehicle failure.

08/08/2023
Travel distance
1,690 km
Duration of PTO operation
0 hrs.

Inspection Date
09/22/2023
Travel distance (estimate)
11,690 km

Inspection Date	09/22/2023	The recommended date for the vehicle's next inspection is written to the left.			
R/i/i* (Recommended inspection interval)	10,000	km	90	days	
This vehicle's R/i/i*	10,000	km	45	days	
Yearly travel distance (estimate)	81,265 km	The yearly travel distance for this vehicle is written to the left. The next appropriate recommended inspection date is informed based on this value.			

Vehicle Operation Type

This vehicle is classified as a Traffic Congestion/Slow Travel type. First, check the stop count and please confirm brake usage. Additionally, battery damage due to poor charging is possible. In the event of frequent traveling on rough/dusty roads, please increase the inspection frequency of air filter elements and lubrication of required areas in addition to the above. For vehicles that are equipped with DPD (DPF) in particular, extreme use of the DPD (DPF) system may impact the fuel economy. However, if the vehicle allows manual regeneration, proactively operating the manual regeneration can reduce the load on the DPD (DPF). Also, if you sense something wrong with the DPD (DPF), we recommend that you get an early inspection, to reduce the cost of vehicle failure.

Breakdown of engine operation hours

Classification result **Traffic congestion/slow travel**

Idling (5 min or more)	17 %
Traffic congestion/slow travel	34 %
General travel	50 %
Fast travel	0 %

Vehicle operation time	97 hrs
PTO operation time	0 hrs
PTO operation ratio	0 %

Fuel Economy And Running Cost

Not enough data to compare. Fuel Consumption Data is as listed below. This data can be compared with previous reports if the Health Report was produced multiple times in the past.

Recent fuel economy

4.78
km/liter

Fuel price 175.1 (KSH/ liter)

	Overall	1st time
Fuel economy (km/liter)	4.78	4.78
Fuel cost (KSH/ km)	36.64	36.64
Travel distance (km)	1,690.23	1,690.23

Mountain Travel

The distribution of operating elevations for this vehicle is within the typical range. Get inspections and maintenance according to the other report items and the Owner's Manual.

Extensive driving on mountain roads (anticipated)

No

Distribution of vehicle operating elevations

Operation In Cold Areas

The temperature distribution during operation of this vehicle is within the typical range. The vehicle must be inspected and maintained according to the other items on this report and the Owner's Manual.

Operation in cold climate areas

No

Temperature distribution during vehicle operation

Exhaust Brake Operation

The usage of the exhaust brake for this vehicle is within the typical range. Use of exhaust brake is effective for safe driving and preserving the foot brakes so it should be used frequently. And to prevent impacting the fuel economy with use, be diligent in flipping the switch on and off.

Number of times of exhaust brake operation

670 times

Distribution of exhaust brake operation ratio at each speed level

Accelerator Pedal Operation (Acceleration)

The distribution of acceleration for this vehicle is within the typical range. Get inspections and maintenance according to the other report items and the Owner's Manual.

Recent number of times of sudden acceleration

84 Times

Distribution of acceleration A/O* (Acceleration Operation)

	1st time
A/O* not sensed by passenger	97.22%
A/O* not discomforting to passenger	2.71%
Sudden acceleration	0.07%
Total acceleration (times)	129,211
Total sudden acceleration (times)	84

Accelerator Pedal Operation (Accelerator Position)

The ideal acceleration operation should follow the dotted line for fuel-efficient driving. The accelerator level is being kept relatively small for good fuel efficiency, but there is a bit more possibility for improvement. Keep the accelerator level as small as possible, and if using a manual transmission vehicle, shift up quickly to improve fuel efficiency.

How the accelerator pedal is used

Small improvement is still possible

Routine Check

Belts

Check for any stretching, cracks, and damage of belts.

☐ OK ☐

Wipers

Check that wipers operate correctly without noise. Check links for looseness and vibration.

☐ OK ☐

Engine leaks

Check heater hoses, radiator rubber hoses, and their attachments for leaks and related damage. Check the water pump for leaks.

☐ OK ☐

Tire tread

Check tires for abnormal wear, damage and tire tread.

☐ OK ☐

Other

☐ OK ☐

Clutch

Check clutch pedal play and the clutch fluid amount.

☐ OK ☐

Battery

Check the battery fluid level. Allow starter to rotate to check if engine starts and runs normally.

☐ OK ☐

Shift rod

Check ball joints for any knocking. Check boots for any cracking. Check lock nuts for looseness.

☐ OK ☐

Condensation of water in air tank

Pull the drain cock ring and check the amount of drainage.

☐ OK ☐
